

## Introduction for Teachers: Curriculum Overview

### Solar Dynamics Observatory (SDO) Project Suite Overview

Imagine a classroom of “student scientists” that master standards-based STEM content through integration of language arts, social studies, and art. Picture motivated, student-led teams actively engaging in an authentic exploration of our nearest star, the Sun, that are:

- Designing a Solar Science movie, image sequence, and more created from real-time solar imagery and data from NASA’s SDO satellite;
- Predicting space weather using actual SDO solar data to make a forecast
- Building and investigating with instrumentation used to study the Sun;
- Presenting an interactive Solar Science exhibit to a community audience to explain and demonstrate the Sun’s effects on Earth’s life and society.

The *SDO Project Suite* engages students in these innovative types of learning experiences. Teaching students through self-directed solar explorations encourages them to be engaged learners in order to understand the science of our Sun and to apply the knowledge they gain to solve tomorrow’s solar situations. The *SDO Project Suite* assists teachers by offering a coherent, project-based Solar Science curriculum that integrates core STEM content through a multi-disciplinary lens that includes language arts, social studies and art. Not only do students master content standards but they also develop 21st century skills related to digital literacy, media literacy, critical thinking, problem solving, and collaboration with peers – similar to scientists’ experiences!

### Living With a Star Program: SDO Mission

Heliophysics is the study of the Sun and its interactions with Earth and the solar system.

NASA’s Heliophysics science program consists of two main programs: ‘Solar Terrestrial Probes’ and ‘Living with a Star’ (LWS). LWS emphasizes the science necessary to understand those aspects of the Sun and space environment that most directly affect life and society on our planet. The first LWS mission is the Solar Dynamics Observatory, which was launched on February 11, 2010. LWS investigations research the interconnected systems between the Earth and Sun with the ultimate goal of enabling a predictive understanding of the causes of solar activity and its effects on Earth. SDO observes

how the Sun’s magnetic field is generated, structured, and how stored magnetic energy is converted and released into the heliosphere in the form of solar wind, energetic particles, and variations in the solar irradiance.

## SDO Solar Modules 1, 2, 3

Activities A, B, C

The series of four Solar Modules in the *SDO Project Suite* lead students through an interactive exploration of Solar Science. The first module provides an understanding of the structure of the Sun, the second module investigates how and why the Sun is studied, and the third module explains the significance of solar activity on Earth's habitability and the affects of space weather on Earth. Students will learn directly from actual data that scientists collect and use. Student teams independently choose and complete one Activity (A, B or C) from each of the first three modules, which act as formative assessments. In the fourth and final module, teams collaborate to design and present their three Solar Module activities as part of their 3-D Solar Exhibit summative assessment.

The *SDO Project Suite* guide is designed as a comprehensive curriculum that integrates new and adapts existing Solar Science lessons into a series of coherent lessons and projects with real-life application. Included are integrated technology components and online resources like Heliviewer. The SDO Solar Module Matrix enables student-led teams to demonstrate higher-order thinking skills and student content mastery of STEM disciplines while also incorporating language arts, social studies, and art standards. Though the SDO Solar Modules are designed as a scope and sequence for a comprehensive unit, each module activity may be completed as a stand-alone scientific investigation.

### SDO Solar Module Teacher Guide Components:

**Grade Level:** 6-8

**Unit Length:** 4-6 weeks total (may be chunked over a quarter, semester, year)  
Individual Solar Modules: 1-10 days each, 3-D Solar Exhibit: 1-2 weeks total

#### Overview

Each *SDO Project Suite* Solar Module is introduced with a module overview. This introduces important and essential content that is necessary for both teachers and students to know in order to build knowledge and successfully complete the modules.

#### Objectives

Each SDO Solar Module has specific learning objectives that provide a scope and sequence that foster independent learning within a collective student-directed approach to investigating Solar Science.

## Essential Vocabulary

Essential terminology is embedded within the modules to support student comprehension of Solar Science and SDO content.

## Module Lesson

Materials:

Each *SDO Project Suite* Solar Module provides a complete list of equipment and materials required per student team.

Teacher Prep:

Sequential steps to prepare for each *SDO Project Suite* Solar Module are provided to support teachers in managing their student-led teams.

## Student Engage & Explore!

The *SDO Project Suite* is unique in that it enables collaborative student teams to select their own pathway in choosing and completing three of the nine SDO Solar Modules Activities. Based on their interests, teams select one Activity (A, B, or C) from each of the three Solar Modules (1, 2, and 3). The fourth Solar Module culminates in teams presenting their 3-D Solar Exhibit as part of a class-wide SDO Exploration Museum. The museum event is a unique opportunity for teams to illustrate and demonstrate student learning and mastery of Solar Science concepts via a summative performance assessment. Each SDO Solar Module activity is broken down into the following steps that sequentially develop student skills order to:

BUILD Knowledge

APPLY Learning

DEMONSTRATE Ability

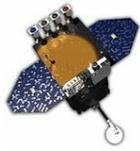

CREATE Resources & CONNECT to the Real World

## Differentiation & Extension

A range of activity options are presented, which can be included and adapted for the *SDO Project Suite* based upon student interest, ability, and timeframe available. The SDO Solar Modules are designed for teachers to act as mentor and coach and empower students to develop their own passion for learning.

## Internet Resources

A wide variety of additional resources that support the *SDO Project Suite* Solar Modules are included as part of each module's Teacher's Guide. These resources have been reviewed and provide teachers with additional scientific information and opportunities to further student engagement and exploration.

## SDO Module 4 Performance Project

### 3-D Solar Exhibit

The culminating activity for the *SDO Project Suite* is the classroom SDO Exploration Museum event. As part of the collective museum, each student team designs, constructs, and curates their own interactive 3-D Solar Exhibit that consists of the activities and artifacts, which the teams completed for Solar Modules 1, 2, and 3. The SDO Solar Exploration Museum event is a great opportunity to showcase and share student learning not only between student teams but also within the school, district, and community.

Regular group “check-ins” throughout this module’s performance-based assessment provides teams with the monitoring and support they need to ensure progress and success in demonstrating proficient student achievement. A teacher-completed Content & Exhibit Rubric and a Group Self-Evaluation Rubric are provided for evaluating this summative assessment module.

## Summative Performance-based Assessment

### 3-D Solar Exhibit Elements

- Videos
- Demo Stations
- Models
- Dioramas
- Posters & Murals
- Slide Shows
- Interactive Exhibits
- Podcasts
- Digital Exhibits
- Students-as-Curators

## Solar Exhibit Components & Sequence:

### Part 1: Solar Exhibit Planning

- 1) Identify Completed Solar Module Content Activities
- 2) Select Solar Exhibit Design Format

### Part 2: Solar Exhibit Preparation

- 3) Write Draft - Content, Image & Artifact Descriptions
- 4) Cite Sources - Content, Images & Artifacts
- 5) Type Final Copy - Content, Image & Artifact Descriptions
- 6) Prepare Images & Artifacts for Exhibit

### Part 3: Solar Exhibit Creation & Evaluation

- 7) Create 3-D Solar Exhibit (following exhibit guidelines)
- 8) Content & Exhibit Rubric and Group Self-Evaluation Rubric

### Part 4: SDO Exploration Museum

- 9) Attend Class SDO Exploration Museum Event
- 10) Congratulations, SDO Module 4 is finished!

## Solar Dynamics Observatory: Solar Module Matrix

SDO Solar Module Topics	Activity A	Activity B	Activity C
Module 1 What are the features of the Sun?	1 A. Structure of Earth's Star	1 B. Observing the Sun	1 C. Solar Research: Pinhole Camera
	<ul style="list-style-type: none"> <li><a href="#">Intro to SDO Video</a></li> <li><a href="#">SDO Science Overview Video</a></li> <li><a href="#">Sun 101 Video</a></li> <li><a href="#">The Sun's Energy Video</a></li> <li><a href="#">Colors of the Sun Video</a></li> <li><a href="#">Sun Comparison Activities</a></li> <li><a href="#">Sun Trek Fact-ary</a></li> <li><a href="#">Sun Origami Model</a></li> </ul>	<ul style="list-style-type: none"> <li><a href="#">Intro to SDO Video</a></li> <li><a href="#">SDO Science Overview Video</a></li> <li><a href="#">Solar Space Telescopes Video</a></li> <li><a href="#">Sunspot Quiz</a></li> <li>Galileo's Claim Student-Scientist Investigation</li> </ul>	<ul style="list-style-type: none"> <li><a href="#">Intro to SDO Video</a></li> <li><a href="#">SDO Science Overview Video</a></li> <li><a href="#">How to Safely View the Sun Video</a></li> <li>Create a Pinhole Camera</li> </ul>
Module 2 How and why do we study the Sun?	2 A. The Sun & EM Spectrum	2 B. Solar Activity & Magnetism	2 C. Solar Research: Spectroscope
	<ul style="list-style-type: none"> <li><a href="#">SDO AIA Video</a></li> <li><a href="#">SDO EVE Video</a></li> <li><a href="#">EM Spectrum Tour</a></li> <li><a href="#">The Sun &amp; EM Spectrum Video</a></li> <li><a href="#">How to Use Helioviewer Video &amp; User Guide</a></li> <li><a href="#">Helioviewer Activity</a></li> </ul>	<ul style="list-style-type: none"> <li><a href="#">The Dynamic Sun Video</a></li> <li><a href="#">SDO HMI Video</a></li> <li><a href="#">Solar System Magnetism</a></li> <li>Magnetic Solar System PowerPoint</li> <li>Making Sense of Magnetism Activities</li> </ul>	<ul style="list-style-type: none"> <li><a href="#">Spectroscopy in Action Video</a></li> <li><a href="#">Spectroscopy Explained</a></li> <li><a href="#">Graphing the Rainbow Activity</a></li> <li>Build a Spectroscope</li> </ul>
Module 3 How does the Sun affect the Earth?	3 A. Sun-Earth Interactions	3 B. Space Weather	3 C. Solar Research: Magnetometer
